

Aditya Kale

Agentic AI & Full-Stack Systems — building software that reasons, retrieves, and ships. PUNE, INDIA

I build systems that reason, retrieve, and ship.

ABOUT

AI Engineer working at the intersection of agentic systems and production software — designing systems that don’t just generate text, but reason over real data and take action. Founder of Aurelis Digital, sitting across the full stack: architecting the AI layer, designing the interfaces on top of it, and shipping the product end to end.

EDUCATION

B.Tech, Computer Engineering Vishwakarma Institute of Technology, Pune	2025 — 2029 In progress
Higher Secondary (XII), HSC	2025 77.83%
Secondary (X), ICSE DSK School	2023 96.20%

EXPERIENCE

Aurelis Digital	PRESENT
Founder & CEO · Frontend Designer · Agentic AI & Backend Structure	
Running Aurelis end to end — setting direction as founder, designing the interfaces the products ship with, and leading the agentic AI systems underneath them.	

SELECTED PROJECTS

01	City Flow Command	AGENTIC AI · ML · DIGITAL TWIN
	Adaptive traffic system for cities like Pune — retimes signals live, opens emergency corridors for ambulances and fire, and mirrors the network in a digital twin for scenario testing.	
	Agentic AI · Machine Learning · Digital Twin · Traffic APIs · Python	
02	QuantCore AI	PYTHON · QUANTITATIVE BACKTESTING
	Python server pulling equities data via yfinance, running strategies (RSI, MA crossover) against a given capital and date range, returning backtests as numbers and charts.	
	Python · FastAPI · yfinance · Pandas · Backtesting	
03	Senate AI	RAG · MULTI-AGENT SYSTEMS
— 05	A digital cabinet for early-stage startups — Legal, Finance, Marketing, Hiring, Operations, and CEO agents each reason over their own retrieval corpus, then converge on one devised plan.	
	RAG · Multi-Agent · LangChain · Vector DB · Next.js	
04	CaseEase	FULL-STACK · CIVIC PLATFORM
	Digitises case filing in India end to end — from lodging an FIR to the courtroom — with every intermediate stage tracked, timestamped, and visible to the person waiting on it.	
	Next.js · Node.js · PostgreSQL · TypeScript	
05	Reducing Power Consumption	HARDWARE · SENSING
	Hardware build that meters electricity use and regulates it against room brightness, humidity, and temperature — measured 35–40% lower consumption in testing.	
	Embedded · Sensors · Automation · Python	

TECHNICAL SKILLS

AI SYSTEMS	LANGUAGES & FRAMEWORKS	DATA & BACKEND
Agentic AI	Python · FastAPI	PostgreSQL
RAG & Retrieval	TypeScript · Next.js	Vector Databases
Multi-Agent Coordination	Node.js	Pandas · NumPy
Agent Orchestration		Time-Series Analysis
Vector Search · Embeddings		Backtesting & Model Evaluation
LangChain		
PRODUCT & DESIGN	HARDWARE & SYSTEMS	TOOLS
Frontend / Interface Design	Embedded Systems	Git
Full-Stack Architecture	Sensors & Automation	yfinance
Digital Twin Systems	Traffic / Real-Time APIs	Cloud — TBD

LEADERSHIP & ACHIEVEMENTS

Founder & CEO — Aurelis Digital	<i>Awards / certifications</i>
Set product and technical direction end to end — from agentic AI architecture to shipped interface.	<i>Add if applicable</i>
